

March 4, 2015

On March 3, 2015 CMS released an updated version of the EDGE server software to address any issues that some issuers were encountering with the enrollment file ingest process. In order to give issuers more time to upload their data using the new software version, CMS is postponing the March 5, 2015 reinsurance and risk adjustment calculation runs until March 10, 2015. The reinsurance and risk adjustment calculation runs will only execute successfully on servers with enrollment files that were loaded on or after February 28, 2015 (i.e., issuers must have an enrollment file on their servers that was successfully loaded after the 2/27/15 software release). Please upload an updated enrollment file prior to March 10, 2015 calculation run, if you have not completed this step.

CMS will soon send out an updated schedule which reflects all of the changes to the March calculation run schedule.
